Standards Respecting Pipeline Crossings Under Railways (PDF)

Rail transport is a means of transferring of passengers and goods on wheeled vehicles running on rails, also known as tracks. It is also commonly referred to as train transport. In contrast to road transport, where vehicles run on a prepared flat surface, rail vehicles (rolling stock) are directionally guided by the tracks on which they run. Tracks usually consist of steel rails, installed on ...

The railway signalling system used across the majority of the United Kingdom rail network uses line-side signals to control the movement of trains.. The current system mostly uses two, three, and four aspect colour light signals using track circuit block signalling. It is a progression of the original absolute block signalling that can still be found on many secondary lines.
